

MFM Dataset field and target creation

Note: Disk files are all
tab-separated value (.csv)

Note: Process bubbles are all
Jupyter Notebooks (.ipynb)

- Clean text
- Drop 'Sitenum' and 'onepregflag'
- Drop vars that aren't pre, intra, or target.
- Move (1,2) to (0,1)

- Create target vars. (e.g., trans_loss)
- Clean variables (e.g., BESTGA)
- Normalize continuous vars.

- Drop multicollinear data fields per target
- Write out final data file per target
